

Connect Database With PHP

CSE311 Lab

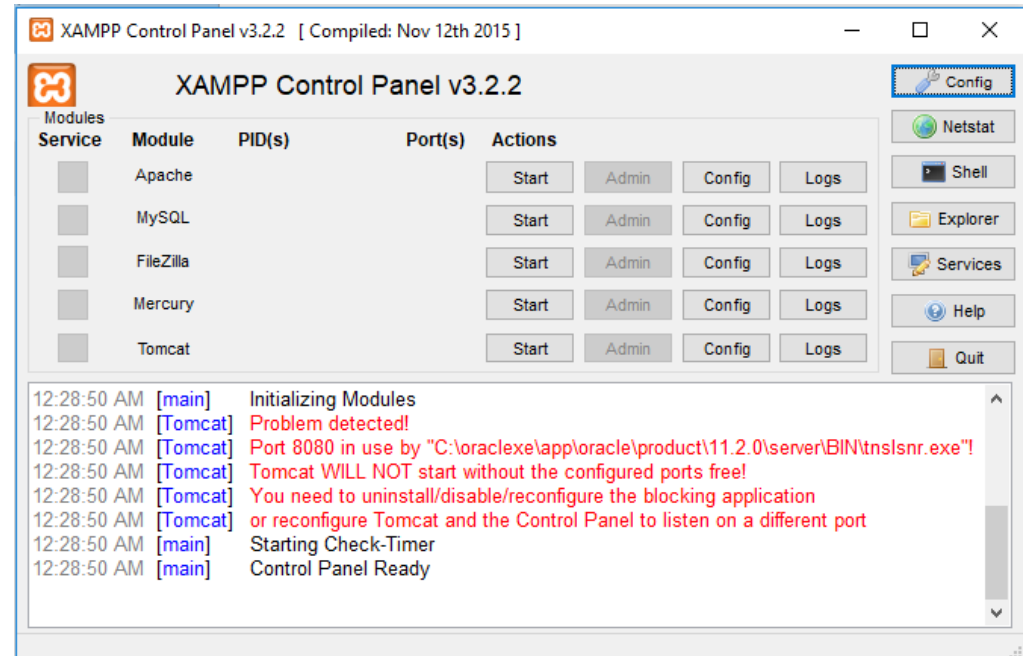

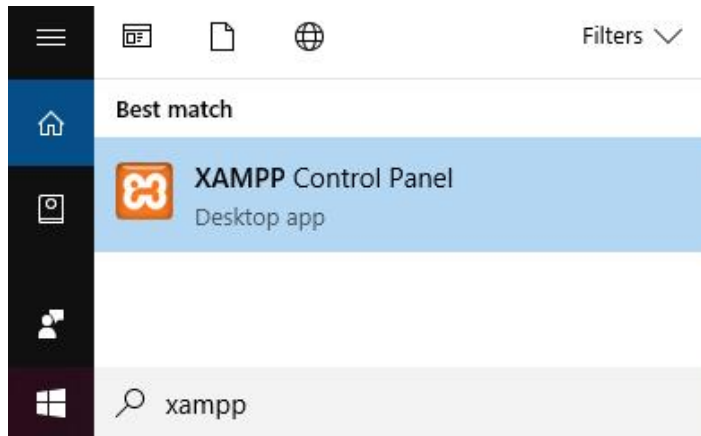

Muyeed Ahmed

PART 1: MYSQL

Step 1:

CREATE DATABASE

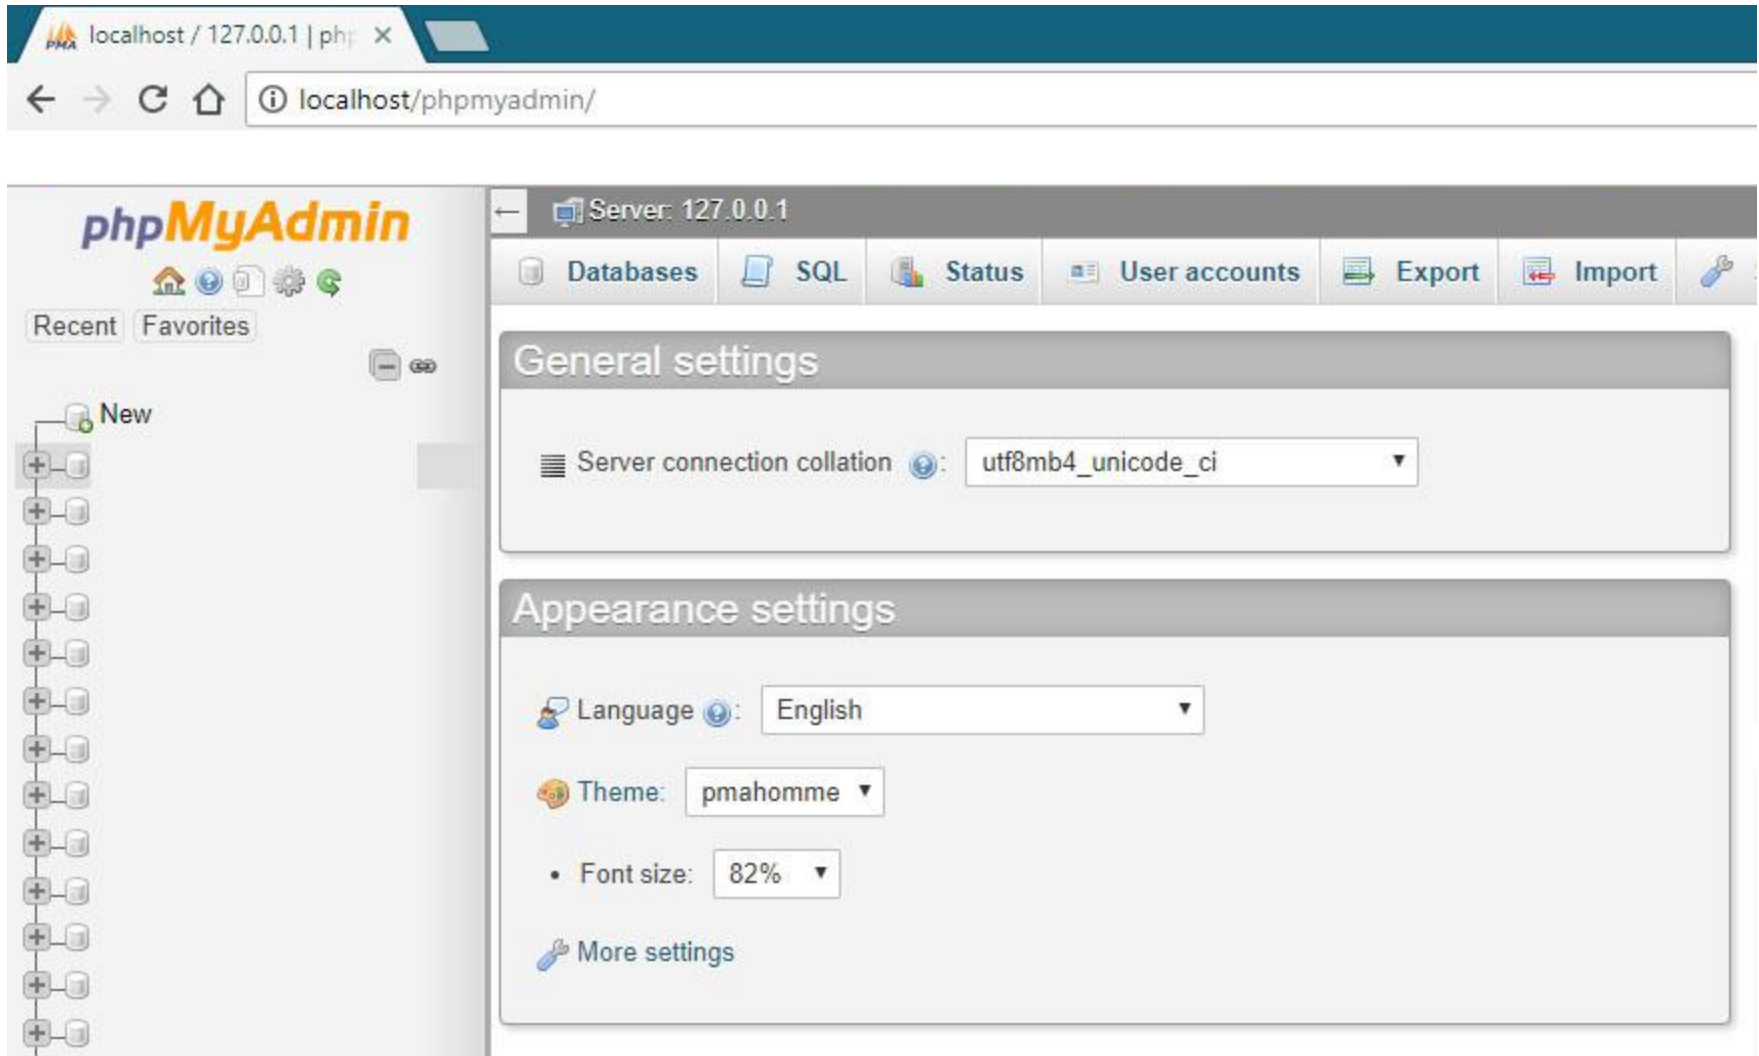

Open XAMPP Control Panel

Start Apache and MySQL

Go to “localhost/phpmyadmin/”

Create new Database

PART 1: MYSQL

Step 2:

CREATE TABLE

Create Table Using GUI

 Structure	 SQL	 Search	 Query	 Export	 Import	 Operations	 Privileges	 Routines	 Events	 More
---	---	--	---	--	--	--	--	--	--	--

 No tables found in database.

Create table

Name:

Number of columns:

Go

Add Table Attributes

Name	Type 	Length/Values 	Default 	Collation	Attributes	Null	Index	<u>A</u> Comments
<input type="text" value="STUDENT_ID"/> <small>Pick from Central Columns</small>	INT ▼	<input type="text"/>	None ▼	<input type="text"/>	<input type="text"/>	<input type="checkbox"/>	<div>PRIMARY ▼</div> <div>PRIMARY</div>	<input type="checkbox"/>
<input type="text" value="FIRST_NAME"/> <small>Pick from Central Columns</small>	VARCHAR ▼	30	None ▼	<input type="text"/>	<input type="text"/>	<input checked="" type="checkbox"/>	<div>--- ▼</div>	<input type="checkbox"/>
<input type="text" value="LAST_NAME"/> <small>Pick from Central Columns</small>	VARCHAR ▼	30	None ▼	<input type="text"/>	<input type="text"/>	<input type="checkbox"/>	<div>--- ▼</div>	<input type="checkbox"/>
<input type="text" value="DOB"/> <small>Pick from Central Columns</small>	DATE ▼	<input type="text"/>	None ▼	<input type="text"/>	<input type="text"/>	<input type="checkbox"/>	<div>--- ▼</div>	<input type="checkbox"/>
<div><div>Table comments: <input type="text"/></div><div>Collation: <input type="text"/></div><div>Storage Engine:  <input type="text" value="InnoDB"/></div></div> <div><div>PARTITION definition: </div><div><input type="text"/></div></div>								
<div>Preview SQL</div> <div>Save</div>								

Create Table using query

- Go to SQL

- And Write the following query

```
CREATE TABLE students (  
  STUDENT_ID INT PRIMARY KEY,  
  FIRST_NAME VARCHAR(30),  
  LAST_NAME VARCHAR(30) NOT NULL,  
  DOB TIMESTAMP  
)
```

Table Structure

	Browse		Structure		SQL		Search		Insert		Export
<div> Table structure</div> <div> Relation view</div>											
	#	Name	Type	Collation	Attributes	Null	Default	Extra			
<input type="checkbox"/>	1	STUDENT_ID 	int(11)			No	None				
<input type="checkbox"/>	2	FIRST_NAME	varchar(30)			Yes	NULL				
<input type="checkbox"/>	3	LAST_NAME	varchar(30)			No	None				
<input type="checkbox"/>	4	DOB	date			No	None				

PART 2: PHP

Step 1:

CREATE PHP FILES

Go to “C:\xampp\htdocs” and create a folder

In that folder create the PHP files

Step 1:

ESTABLISH CONNECTION

Create “connection.php” file in the project folder. And write the following code.

```
1 <?php
2 $servername = "localhost";
3 $username = "root";
4 $password = "";
5 $database = "sampledatabase";
6
7 // Create connection
8 $conn = mysqli_connect($servername, $username, $password, $database);
9
10 // Check connection
11 if (!$conn) {
12     die("Connection failed: " . mysqli_connect_error());
13 }
14 echo "Connected successfully";
15 ?>
```

When we use XAMPP the server name and user name is “localhost” and “root” by default, and password is null. The database name should be the one you gave while creating the database.

To test if this works go to “localhost/SampleProject(name of the project)/connection.php ”

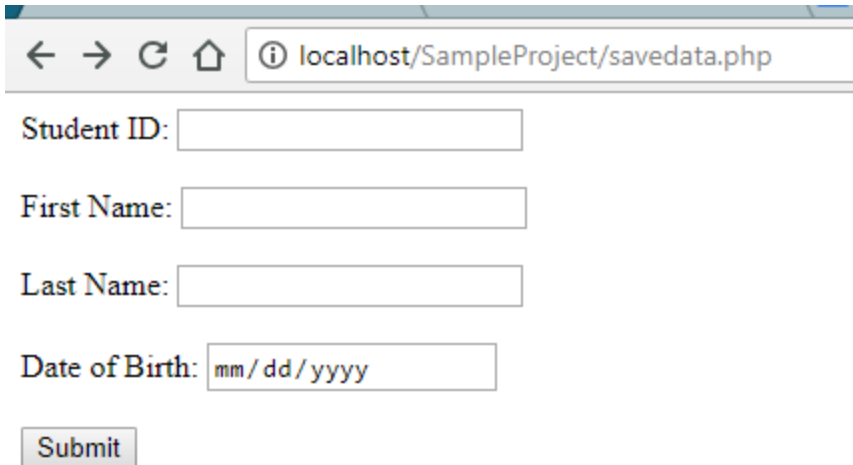

Step 2:

**CREATE FORM, STORE DATA AND
RETRIEVE DATA**

HTML code to create form

```
<form action="savedata.php" method="post">  
    Student ID: <input type="number" name="s_id"><br><br>  
    First Name: <input type="text" name="fn"><br><br>  
    Last Name: <input type="text" name="ln"><br><br>  
    Date of Birth: <input type="date" name="dob"><br><br>  
    <input type="submit" name="submit">  
</form>
```

Output:

A screenshot of a web browser window displaying the rendered HTML form. The browser's address bar shows the URL `localhost/SampleProject/savedata.php`. The form contains the following elements:

- A label "Student ID:" followed by a text input field.
- A label "First Name:" followed by a text input field.
- A label "Last Name:" followed by a text input field.
- A label "Date of Birth:" followed by a date input field showing the placeholder text `mm/dd/yyyy`.
- A "Submit" button at the bottom.

PHP code to save data in the database

<?php

```
    if (isset($_POST['submit'])) {  
        include_once "connection.php";  
        $student_id = $_POST['s_id'];  
        $first_name = $_POST['fn'];  
        $last_name = $_POST['ln'];  
        $date_of_birth = $_POST['dob'];  
        $query = "INSERT INTO student (student_id, first_name, last_name, dob)  
                VALUES ('".$student_id."', '".$first_name."', '".$last_name."',  
                        '".$date_of_birth."')";  
  
        if ($conn->query($query) === TRUE) {  
            echo "New record created successfully";  
        } else {  
            echo "Error: ";  
        }  
        $conn->close();  
    }
```

?>

PHP code to retrieve data

```
<?php
```

```
    include_once "connection.php";
```

```
    $sql = "SELECT student_id, first_name, last_name, dob FROM student";
```

```
    $result = $conn->query($sql);
```

```
    if ($result->num_rows > 0) {
```

```
        while ($row=$result->fetch_assoc()) {
```

```
            echo "Student ID:" . $row['student_id']. " - First Name: " .
```

```
            $row["first_name"]. " - Last Name: ". $row["last_name"]. " - Date of  
            birth: ". $row["dob"]. "<br>";
```

```
        }
```

```
    } else {
```

```
        echo "0 results";
```

```
    }
```

```
    $conn->close();
```

```
?>
```
